

Professional summary

Information Technology graduate and freelance web developer who builds responsive websites, business systems, and cross-platform digital products. Hands-on work includes React and TypeScript interfaces, Laravel and PHP applications, MySQL data models, role-aware workflows, testing, and deployment preparation. Focused on clear user experience, maintainable code, and practical business requirements.

Experience

Freelance Web Developer

Self-employed / contract-based | 2024 - Present

- Design and develop responsive websites and full-stack systems for defined business and user workflows.
- Built a Laravel property-management portal with tenant, landlord, and administrator roles, relational data, Livewire interactions, and configured payment integration.
- Handle requirements, interface planning, implementation, testing, deployment preparation, and client communication as a solo developer.
- Document demo limitations, integration boundaries, hosting requirements, and post-launch considerations clearly.

IT Capstone Developer

Academic project - BS Information Technology | 2023 - 2024

- Developed web-based systems using PHP, MySQL, HTML, CSS, and Bootstrap.
- Applied MVC structure, database design, CRUD workflows, system analysis, testing, and project documentation.
- Collaborated on implementation and presentation of a full-stack capstone system to faculty panels.

Selected projects

NexaCart - E-commerce Marketplace and Administration

React 19 / TypeScript / Vinext / Tailwind CSS / Recharts

- Built connected storefront, search, product, cart, checkout, customer, inventory, order, promotion, and reporting workflows.
- Separated typed commerce rules behind a service boundary and covered critical behavior with automated tests.

BookSync - Booking and Appointment Management

React 19 / TypeScript / Vite / Zod / Vitest / Playwright

- Implemented admin, staff, and customer workflows with Manila timezone handling, conflict-aware scheduling, reports, and exports.
- Added local persistence safeguards, permission rules, responsive layouts, and browser workflow tests.

InvenTrack - Inventory Management System

React / TypeScript / Vite / Tailwind CSS / Vitest

- Created role-aware catalog, supplier, stock movement, low-stock, reporting, CSV export, and audit workflows.
- Centralized inventory mutations in a replaceable service layer with checks for duplicate SKUs and invalid stock movement.

Properties Management Portal

Laravel 11 / PHP 8.2 / Livewire 3 / MySQL / Tailwind CSS / Stripe

- Developed role-based property listings, search, gallery, booking, lease, administration, and payment workflows.
- Used Laravel MVC conventions and relational data modeling with documented environment and deployment configuration.

BakeSmart2D - Cross-platform 2D Application

Phaser 3 / TypeScript / Vite / Electron / Capacitor / Android

- Delivered one web game build through browser, Windows packaging, and an Android test wrapper with offline core gameplay.

Technical skills

Frontend	HTML5, CSS3, JavaScript, TypeScript, React, Tailwind CSS, Bootstrap, responsive design
Backend and data	PHP, Laravel, Livewire, MySQL, application validation, REST/API integration, Stripe integration
Testing and quality	Vitest, Playwright, Testing Library, Node test runner, accessibility and responsive workflow checks
Tools and delivery	Git, GitHub, Vite, npm, Composer, Docker, Cloudflare Workers, Render, Electron, Capacitor

Education

Bachelor of Science in Information Technology

Mary The Queen College of Pampanga, Inc. | 2020 - 2024

- Coursework and project work covered web development, database management, system analysis, software engineering principles, networking fundamentals, and IT project management.
